

## Hints For The Handy

### A Hand Tool That Gets Applause

(NAPSA)—Here's something saw users can sink their teeth into. A hacksaw that features two blades and a frame that can be configured in four distinct ways: one for general use, another for making flush cuts, a third for work in tight spaces and a fourth for making a variety of inside cuts as a sturdy jab saw.

**A saw that knows no boundaries is something do-it-yourselfers and pros consider a cut above.**

#### How It Works

The versatile tool, called the Nicholson® ProSeries 4-in-1 hacksaw, can be quickly switched from the standard 90-degree configuration to a 45 degree angle for making flush cuts. When working in tight spaces, the front section of the frame flips up and out of the way and the blade can be repositioned to low profile. The 4-in-1 hacksaw also provides magnetic blade storage in the frame for the extra blade used in jab saw configuration.

It's available through local retail outlets as well as Internet retailers and industrial distributors.
