A New Lighting Solution To The Indoor Blahs

(NAPSA)—No life can exist without the presence of natural sunshine.

Each spring, people feel the joy and energy that longer, sun-filled days bring. All of nature wakes up to the added benefit of more and more natural light.

Now you can get the benefits of natural sunlight even indoors. By simply replacing your old-fashioned fluorescent lighting or halogen lamps with full-spectrum lighting, you can instantly enhance your environment and your well-being. Simulated full-spectrum light is color-corrected light that operates in the range of 400 to 800 nanometers. This light simulates the optical brilliance of outdoor light at noon. The secret to true-color light and optically balanced light is how close you can get to the optics of natural light. The sun at noon has a CRI (color rendering index) of 100 and a natural color temp of 5,900 Kelvin. The newest scientific readings show BlueMax Lighting compares to noon sunlight.

Full spectrum lighting can reduce glare, eye strain, fatigue, headaches, stress, and even allergic skin reactions. It can also balance your wake/sleep cycles. Peo-

Let there be “natural” light; even indoors.

ple who have Seasonal Affective Disorder report to their doctors a higher recovery under full-spectrum lighting. This is because when you create light that matches the optical brilliance of sunlight, the pupils in the eyes become smaller, generating clearer vision and higher perception. Full Spectrum Solutions offers products ranging from fluorescent tube replacements and reading lamps to commercial lighting and light therapy for Seasonal Affective Disorder. For more information or to order, go to www.bluemaxlighting.com.
