

INGENIOUS IDEAS

A Touchy Subject

(NAPSA)—If you own a handheld or tablet computer, an ultra mobile personal computer (UMPC) or a point-of-sale (POS) system—vital to many business owners—then you know how important the touchscreen is. Without the touchscreen, it becomes virtually impossible to use the device.

However, the touchscreen is a very delicate instrument, susceptible to scratches, gouges, dirt, dust, grease, oil and wear and tear due to normal use—all of which can render the touchscreen inoperable.

Clear protectors that are glare- and bubble-free can help keep touchscreen devices in working order.

A company known as PosR.us offers the solution: a custom-fit, ultrathin, long-lasting touchscreen protector. These patented cover films are only 0.005" thin material, yet are stiff enough to stay flat on the screen without warping during use. They install easily and leave absolutely no air bubbles between the film and the screen. You won't even notice that it's there.

The company offers touchscreen protectors for touchscreen POS terminals, mobile tablet PCs, UMPCs, laptop computers and other touchscreen devices. To learn more, call (516) 770-6661 or visit www.PosR.us.
