

Chemical Safety For The Pool

BioGuard Offers Tips in Time for Summer Swimming

(NAPSA)—Swimming pools can be a source of many things—exercise, relaxation and just plain fun. What they should never be is a source of worry or danger. BioGuard, a leading manufacturer of pool and spa care products, recommends consumers keep pool chemical safety a top priority.

BioGuard recommends the following safety tips around your pool:

- Read the product label and follow directions carefully.
- Always add maintenance products to the pool water separately and in different areas. Do not mix chemicals of any kind together.
- Do not inhale fumes or allow products to get in your eyes, nose or mouth.
- Do not smoke around chemicals.
- Store chemical products safely and out of the reach of small children.
- Clean up any spills as soon as they occur and dispose of the material in a safe manner.
- Keep pool maintenance products in a cool, dry, well-ventilated area, away from other household or garden chemicals and petroleum products.
- Keep chemical product containers tightly closed when not in use.
- Not all chlorinated products are the same even if they are packaged similarly or smell the same. Never mix chlorinated products of different brand, type, or kind.
- When adding products to a bucket to dilute, always add products to water, never add water to products.
