Bringing Home An Authentic Movie Theater Experience

(NAPSA)—While many people enjoy watching movies on TV, some flicks just look better on a big screen. So when viewing a panoramic epic such as “Ben-Hur,” an out-of-this-world fantasy like “The Lord of the Rings” or an action-adventure à la “Raiders of the Lost Ark,” bigger truly is better—and this holiday season, it’s even easier to create a Hollywood movie theater experience right in your own home.

The latest high-definition (HD) projectors are designed for homeowners who want to recreate an authentic and professional digital movie theater experience, with no showtimes to rush to and no unruly movie patrons to deal with. These new HD projectors make you the master of your own theater. They also produce rich and vibrant colors with extraordinary clarity for outstanding picture quality.

For instance, the Mitsubishi HC7000 Diamond Series HD projector is truly cutting edge, with 1080p resolution and a remarkably high contrast ratio designed to impress even the most critical home theater aficionados. With a 72,000:1 contrast ratio, rich details, deep blacks and great colors are clear even in dark scenes such as those in sci-fi and action films.

Viewing true theatrical widescreen films with a 2.35:1 aspect ratio is simpler than ever with this new projector. In the past, users needed an expensive lens with a rail or track apparatus that slid an anamorphic lens in and out of the front of the projector, depending on the desired film aspect ratios. With the HC7000, users can now simply position the anamorphic lens permanently and

The latest high-definition projectors let you be the master of your own movie theater at home for an ultimate big-screen theater experience.

push a button to select the appropriate anamorphic modes—either 2.35:1 or 16:9 aspect ratios—for the corresponding movie format. It’s a simple and economical design that saves time and effort while providing the ultimate home theater viewing experience.

With a lamp life estimated to last up to 5,000 hours in conservation mode, Diamond Series projector owners won’t have to change lamps often. But when it does become necessary, the new design makes replacement quick and easy, even when the HC7000 is mounted to the ceiling.

With an HD projector, you can save yourself from the rush and frustration of driving to and from a movie theater this holiday season, make your own popcorn and be the master of your very own movie theater. The Mitsubishi HC7000 and other Diamond Series projectors are available exclusively through custom home-theater systems integrators and high-end retail stores.
