## Cool Tool For School

(NAPSA)—The necessities for college just aren't what they used to be.

Today's college students still need sheets, shelves and notebooks, but the items that can help turn a bland dorm room into a stylish "pad" is what they really want. From ultra-fast laptops to posters and pictures of the latest pop culture icons, a dorm room can be the key to both academic and social success.

Who says home improvement projects have to be reserved for Mom or Dad? Welcome to the world of "Dorm Room DIY"—that's Do-It-Yourself for those not hip to the latest trend in college life. More and more college students are taking on dorm room improvement projects.

"For the amount of time students spend in their dorm rooms, they may as well transform the space into something they enjoy," said Tim LeBeau, Cordless Product Manager at Skil Power Tools. "It's amazing how much more productive someone can be when their surroundings are comfortable."

One Skil tool that has become a staple for college-bound students is the Twist cordless articulating screwdriver. This handy tool has enough power and versatility to assemble a futon, install an organizer, hang a picture or repair a bicycle.

"If there's one power tool that was designed and engineered to fit dorm room life, the Twist is it," LeBeau said.

The 2.4 and 3.6 volt models offer a four-position handle and a flashlight front end to offer college students practicality, convenience and power. The flashlight-style front assists students who are doing projects in less than adequate light to illuminate dark areas such as under their desk, in a closet or behind their bed.

Priced at under thirty dollars, the tool fits cash-strapped college students' budgets and makes a great addition to a basic toolbox. The device is rechargeable, versatile, user-friendly and allows college students to complete any Do-It-Yourself dorm room job they may have in mind.
