Cosmetic Technology: Replacing Traditional Procedures

(NAPSA)—Less body fat and more youthful-looking skin. While these “fountain of youth” qualities are generally associated with celebrities, the latest medical technology is making it possible for everyday people to essentially halt the aging process—addressing the issues of health and aging at the cellular level.

Cells and aging

As the aging process continues through out lives, the metabolic and circulatory systems slowly deteriorate. As a result, parts of your body get less of the nutrients and restorative products they need to continue their normal-healthy functions. This leads to physical changes in the cellulite, local obesity, skin problems such as acne, stretch marks, sun damage and other medical problems.

Technology of the future

Mesoporation is a painless procedure that replaces injections, delivering large doses of therapeutic nutrients into the tissue target areas without needles. The true effectiveness of mesoporation comes from unique formulations invented by Dr. Aleksy Dobradin, M.D. The formulations include, among others, a very healthy dose of vitamins, essential nutrients, co-enzymes, antioxidants, herbal extracts, naturopathic compounds, lipodissolve, rejuvenants and minerals. Exposed to mesoporation, the body's tissues absorb the nutrients in much the same way a sponge absorbs water. Cells are

A new kind of nutrient-delivery procedure can help slow the aging process in cells.

exposed to healing, rejuvenating and restoring compounds for hours, thus providing time for those compounds to exert their effect on the cells. In addition to promoting cellular health, the formulations can be used for fat burning, body sculpting, lifting effects and lipodissolve.

MesoDerm is the world's only FDA-approved drug delivery system able to deliver Dr. Dobradin's formulations. Mesoporation procedures are so effective that if there is no objective improvement after the first three treatments, patients are entitled to a full refund. For more information, visit www.mesoderm.com or call 1-888-MESO-661.
