Create One-Of-A-Kind Floor Designs

(NAPSA)—You may be able to fulfill your own flooring fantasy and design your perfect look with the help of vinyl tile. Tile can make it easy to design a unique floor with the natural look of wood, stone or tile—or your own special combination of all three. You can create a distinctly different floor without draining your bank account—and you can do it yourself in a matter of hours.

“Beautiful room makeovers are quick and painless, even for the do-it-yourselfer, with luxury vinyl tile,” said design expert Diane Martel. “You can create a floor that fits your sense of style and lifestyle with just a few tools like a straight edge and a utility knife.”

You can cut and lay out customized borders and intricate designs that would be difficult or cost-prohibitive using other hard surface flooring. Nafco's individual planks and tiles are all the same thickness so different floor types can be mixed and matched making design possibilities practically endless. For example, marble tiles can be bordered by a wood grain strip to add dramatic interest in a foyer, or various widths and colors of wood can be combined for an elegant basketweave pattern for a kitchen/great room area.

Installation is practically hassle free. Vinyl can go anywhere with minimum subfloor preparation on or below grade. Often the tiles and planks can be installed right over an existing floor.

“Many do-it-yourselfers love a challenge,” Martel added. “But the only challenge they'll get from Nafco is choosing the perfect tex-

Today's vinyl tile lets you mix and match styles and designs—including wood, marble and ceramic looks.

ture, color and finish. There are flooring options to fit in any room or décor.”

Along with the timeless appeal of natural looking materials—it's hard to tell these floors from the real thing—you get all the advantages of vinyl. The flooring that says sit down, relax and enjoy your home, vinyl is great for today's busy families. Vinyl is not only easy to design and install, it's a breeze to clean. It's comfortable—vinyl is cushioned so it's softer, quieter and warmer underfoot—and it lasts a long time. New high-tech wearlayers and backings make vinyl impervious to scratches and scuffs, moisture and mildew.
