## Power Picks For Dad And Grad Gifts

(NAPSA)—Looking to give Dad something different this Father's Day? Hoping to give a great gift to your favorite grad and coming up short?

With most home improvement projects set to begin in June and America swept up in makeover mania, a power tool might make for a terrific present this year. They're a smart choice for dads who hope to improve their nests, as well as grads flying the coop of college to set up nests of their own.

If you recognize your dad or grad from one of the groups listed below, you might just be on your way to finding a terrific token that generates cheers instead of jeers.

**NASCAR Dads/Grads:** For those dads and grads who feel the need for speed, as well as optimal performance, cordless 18-volt drill/drivers are bona fide crowd pleasers. These tools put dad or grad in the driver's seat to take on the toughest projects. The Skil 18-Volt X-Drive drill/driver blends style and substance with a built-in stud-finder, forward/reverse indicator and battery fuel gauge that alerts users when it's time to take a pit stop to recharge.

**Gadget Guys and Gals:** For dads and grads whose mouths water at the sight of the latest tech, laser-guided tools are where it's at. The world's first Skilsaws and jigsaws come equipped with a laser that projects a cut line of light that helps users make quick and easy straight cuts.

**Combo Crazy Crew:** For those who want it all and want it

**Power tools can be a practical gift for both do-it-yourself dads and grads on the go.**

now, consider a combination kit. Cordless kits are priced right and come with a range of essential tools and interchangeable batteries. The Skil Cordless X-Drive Combo Pack, for example, offers five full-size cordless tools for under \$200.

**Handy Men and Women:** Grads moving into a new pad (or dads helping them out) can prevent blistered hands and save time with a power screwdriver. These handy tools are great for assembling furniture, hanging up curtains and any number of common household tasks. Be sure to look for additional features that help combat low-light conditions. Skil has a 3.6-Volt Twist® Power Driver that comes with a light and 200-piece accessory set for about \$30.

If any of these powerful presents get dads or grads fired up to tackle a project, they should visit [skil.com](http://skil.com) for suggested project plans and safety tips.
