

Eliminate Auto Odors

(NAPSA)—When the smells of mud, slush, cigarettes, pets, food spills and so on linger in your car, you can drive them away if you know a few facts and hints.

While common air fresheners use perfumes to try to cover up the smell, they provide only temporary relief that doesn't often cover the entire vehicle. To truly eliminate odor, you have to control the cause.

To that end, there's an odor eliminator that uses ClO₂ technology. It controls odor-causing bacteria, eliminating even the foulest smells quickly and permanently.

You don't have to put up with bad smells in your car.

The EPA-registered, patented technology of Star brite Auto Odor Eliminator is easy to use. Its deep-penetrating vapor gets into all areas of your car's interior—under seats, into the upholstery and throughout the ventilation system—and works within hours. It's also a great way to remove odors from RVs or boats that have been in seasonal storage.

Once you've eliminated bad odors, keep your car smelling sweet: Vacuum it whenever you wash it; make sure there are no food wrappers, cigarette butts or dirty clothes lying around; and don't let anyone smoke in it.
