Future Looks Bright For Flat Panel Monitors

(NAPSA)—A growing number of consumers are getting the picture when it comes to flat panel monitors.

These monitors currently account for about 5 percent of the total number of desktop monitors sold in the U.S. Experts predict, however, that percentage will grow to nearly 20 percent by 2005. These monitors use less electricity, dissipate less heat and are easier on the eyes. In addition, their sleek design saves desk space.

A network furniture company has introduced an adjustable swivel arm for flat panel monitors.

To free up even more desk space, the monitor can be mounted to the Ergotron 300 Series Arm. This allows you to lift, swing, or tilt your monitor for optimum visibility and ergonomic comfort. Patented technology enables you to move the monitor with one hand while maintaining touch-screen stability. What's more, you can move the monitor out of the way when you don't need to use it, thus giving you more work space.

The 300 Series Arm is a new product in Ergotron's line of specialty mounting arms for flat panel monitors. To learn more about Ergotron flat panel and CRT monitor arms and carts, visit www.ergotron.com/arms or call 800-888-8458.
