

## **Protecting Our Environment**

### **Gas vs. Electric Mowers**

#### **Gas Powered**

- Provides more cutting power
- Users can lower emissions by 1/3 through proper maintenance

4-cycle engines contribute only 2% of emissions per year

#### **Electric Powered**

- Battery-packages, which are used to replace power cords, last only 3-5 years
- Proper battery disposal is expensive and environmentally challenging

Electric mowers are powered by plants that produce 61% of VOC emissions
