
Design For Living

Get A Good Look

(NAPSA)—Redecorating may be easier—and less expensive—than you think.

Now you can make over your own room before spending a dime.

A new interactive computer program lets you simply load a digital photo of any room in your home, use the program's tracing tool to outline the areas you intend to redo, and be ready to explore myriad design combinations for all tastes and budgets. This complete room makeover tool lets you virtually transform your room before investing a cent in paint or materials or moving furniture.

Armstrong's *Design my Room*SM is the natural evolution from the Armstrong Web site's highly popular Design a Room tool. Given the demand from an increasingly technology-savvy public, Armstrong's innovative software now allows you to work with images of your own room, not generic photos.

The custom tool incorporates paint palettes from leading paint manufacturers Benjamin Moore[®] and Sherwin-Williams[®] along with Armstrong flooring, including Bruce[®], Hartco[®] and Robbins[®] hardwood, as well as laminate, ceramic and resilient floors, ceiling and cabinet options.

*Design my Room*SM is available as a CD-ROM (\$12.99) at www.armstrong.com or may be downloaded directly from the Web site (\$9.99).
