

## Green Textbooks

(NAPSA)—A smart way to teach students about the importance of protecting the planet is to use textbooks printed on 100 percent recycled paper.

That's what happens this year as Go Math! textbooks go green. The textbooks for grades K through 5 are the first of their kind to receive a "Green Edition"

**Using recycled fiber to produce textbooks helps reduce energy use, water consumption and landfill waste.**

seal, which certifies that the publisher—Houghton Mifflin Harcourt—used environmentally responsible manufacturing and distribution processes to produce and deliver the series from author to reader.

The publisher estimates that over the life of the book's adoption in Florida alone, the green textbooks will save 40,000 trees, 8 million gallons of water, reduce air emissions by 3.8 million pounds and eliminate 1 million pounds of solid waste.

Additional company initiatives include using recycled corrugate material and more soy-based inks. For more information, visit [www.hmhpublish.com](http://www.hmhpublish.com).
