LASIK And Your Bottom Line

(NAPSA)—Did you know that over a lifetime, a 25-year-old wearing extended-wear contacts will spend upwards of \$20,000? Choosing modern LASIK, also known as iLASIK, invests in your vision and can save you money in the long term.

Many Americans with vision care expenses are taking another look at modern LASIK.

Today, when every penny counts, many Americans with vision care expenses are taking another look at modern LASIK.

The iLASIK procedure combines Wavefront mapping technology with two lasers for a safe and completely tailor-made procedure. It is covered by most health savings accounts, offering a tax-deductible way to pay for better vision.

“For me, iLASIK will pay for itself in seven years by eliminating the ongoing cost of glasses, contact lenses and solutions,” said Stefanie Fujinami, who had the iLASIK procedure this year with nationally recognized ophthalmologist Dr. Robert Maloney. “The next morning, I had 20/20 vision—I could even read the fine print on the toothpaste!”

For more information and to calculate your lifetime costs of wearing contacts, visit www.iLASIK.com.
