

## Magnet Therapy

(NAPSA)—A new kind of athletic shoe was truly made for walking—and thanks to magnets in the midsole, it may help provide walkers with relief from podiatric pain and stress.

**Walk this way—and let magnets do the work, helping your feet heal.**

Bioflex's patented concentric circle magnetic system, found in the midsole of the Etonic Magnetix Walker, accelerates healing of foot ailments by attracting and repelling charged particles in the blood, creating movement and generating heat. The process causes the blood vessels to dilate, thus increasing circulation. The magnetic field also creates a slight electric current that stimulates the nervous system to block pain sensations.

In clinical tests at Baylor College of Medicine and other institutions, Bioflex concentric circle technology was scientifically proven to generate enhanced pain relief, accelerated healing, increased range of motion, improved circulation and quicker recovery from intense training.

In a recent article called "Walking Fit," *Prevention Magazine* said one consumer who test walked Etonic's Magnetix Walker shoes "raved about them," saying: "I suffer from foot pain that usually keeps me off my feet, but I was able to walk more than an hour at a street fair in summer heat with no pain!"
