

## Natural Biomedicine Offers Effective Pain Relief

(NAPSA)—Understanding what pain is and that there are safer ways of treating pain than using oral pain pills can be a painless first step in finding safe, effective relief.

When you experience pain, your body sends signals to your brain demanding attention. Pain pills block the transmission of the signals, but the source of the pain remains and your pain returns. Also, pain pills can be toxic and many cause serious side effects.

**A natural biomedicine offers safer, effective pain relief with no side effects.**

---

Fortunately, there is a safer way to relieve pain. Patented natural biomedicine Topricin Pain Relief and Healing Cream provides a better solution.

When you apply the cream to the affected area, specialized cells stimulate the removal of toxins and excess fluids, restoring oxygen-rich blood so your body can heal the source of your pain. The natural biomedicine is effective to relieve arthritis pain and even difficult-to-treat pain such as occurs with fibromyalgia and neuropathy, both diabetic and chemo-induced.

Topricin's 11 biomedicines are safe for diabetics, seniors, children, and pregnant women and won't interfere with any other medication you may be taking. The company offers a Foot Therapy Cream and a junior version for children's aches and pains.
