New Answer To Knee Pain From Osteoarthritis

(NAPSA)—Have you or someone you know been diagnosed with knee osteoarthritis (OA)? You may be glad to hear that there is a new treatment available for the pain caused by knee osteoarthritis.

A new medication may help many Americans walk away from knee pain with less worry.

Euflexxa™ (highly purified hyaluronan) is the first treatment of its kind that is not derived from a bird source and is free of avian proteins. This comes as good news to many OA sufferers concerned about possible reactions to treatments derived from chicken or rooster combs.

Euflexxa™ can be prescribed in cases of mild to severe knee osteoarthritis when the use of conservative non-pharmacologic therapy and simple analgesics has failed.

The treatment consists of an injection into the knee, administered in a physician's office, at weekly intervals for three weeks.

For more information about this treatment option, visit www.EUFLEXXA.com.
