

# INGENIOUS IDEAS

## Power Goes (More) Portable

(NAPSA)—Enjoying home comforts at a campsite can be easier if you have the right generator—one that can power fans, entertainment systems, small power tools, appliances and even notebook computers and electronic devices.

Expectations for on-the-go power keep increasing. Not only do people need powerful, fuel-efficient and quiet generators, but they seek compact, lightweight and portable models—especially for use at remote vacation spots.

**Market trends show increasingly higher expectations when it comes to backup power.**

---

One of the most powerful, efficient and portable models is the Honda EU3000i Handi generator. It produces 3,000 watts of power, weighs just 77.6 pounds and can operate on one tank of fuel for more than four hours. Its built-in wheels, folding handles and quiet four-stroke engine make it well suited for any type of excursion. And when the trip is over, it can be used at home for limited backup power during a storm or power outage. For more information, visit [www.honda.com](http://www.honda.com).
