Reinventing The Pencil

(NAPSA)—A wooden pencil has been developed that never needs to be sharpened! It features a #2 lead equivalent liquid form of graphite instead of the solid kind that always needs sharpening.

The UltraSharp Wooden Pencil eliminates the frustration over broken lead and dulled points, particularly with those students

Liquid graphite pencils are changing the way the world writes.

taking standardized tests and SATs, which require an essay written in pencil.

Teachers are pleased with the UltraSharp Pencil because it does away with the distraction of pencil sharpening in the classroom.

Also getting high grades with students is the Liquaphite Mechanical Pencil that has the look and feel of the traditional mechanical pencil but does not contain breakable lead pieces. Instead, this pencil also dispenses patented liquid graphite for smooth No. 2 pencil writing and no lead to break.

UltraSharp and Liquaphite Pencils are invaluable must-have tools, not only to the educational world, but also the professional world or essentially everyone who writes often with pencils.
