## Remodeling Tips

(NAPSA)—It's important, the next time you remodel your kitchen or bathroom, to protect your investment. These areas of your home are tough on fixtures and appliances such as cabinets.

**Make sure kitchen and bathroom cabinets are scratch-resistant.**

The steam of a bathroom and the heat of a kitchen are difficult environments for fixtures and appliances. Cabinet doors are prone to warping as well as scratches and other damage.

Home improvement experts suggest installing products made specifically to stand up to the hard wear and tear kitchens and baths get. For instance, you'll find many fixtures and appliances protected with a powder coated finish. This innovative finish is tough against corrosion and protects items against chipping, scratching and moisture deterioration, and comes in a variety of colors and finishes for a decorative touch.
