Science And Math Scholarships

(NAPSA)—Each year, hundreds of high school students from around the world receive a science and math scholarship to attend a weeklong program in Washington, D.C. The Honeywell Scholars @ Presidential Classroom scholarships give the children of Honeywell employees a chance to learn more about the connection between science, technology and public policy.

Students have a chance to discuss issues and meet elected officials, business leaders and government appointees.

During the program, students can observe Congress in action and interact with members of Congress, presidential appointees, military officers, business leaders and journalists. Students also visit historic, cultural and educational sites such as the U.S. Supreme Court, U.S. Department of State, the National Academy of Sciences and Honeywell's facilities at NASA's Goddard Space Flight Center.
