

MAKING LIFE MORE FUN

New Home Entertainment Technology Creates The Big Picture

(NAPSA)—A growing number of consumers are seeing the big picture when it comes to home entertainment. Where once people only thought in terms of big-screen TVs, digital projectors are now becoming the premier video source for home theater and are being used in family rooms to provide life-size entertainment and enjoyment.

For instance, some enthusiasts are using their home entertainment projectors to host movie nights at their homes on images that measure up to a 12-foot diagonal.

In addition to being connected to a DVD player, some are also connecting their home entertainment projector to gaming consoles so they can battle larger-than-life villains in wonderlands of color, music and action.

Others are projecting the big game on the garage door or hanging a sheet in the backyard, turning it into an instant neighborhood drive-in or barbecue.

Still, others are reliving vacations by projecting life-size memories. All of these options are possible because home entertainment projectors are as affordable as many big-screen TVs and easily and simultaneously connect to a broad range of entertainment sources including DVD players, gaming consoles, digital cameras and camcorders—even cable and satellite receivers.

For example, the InFocus ScreenPlay 4805 digital projector makes it possible for anyone to watch the latest DVD releases, high-definition broadcasts, biggest sports events, and play video

The latest in home entertainment technology can be used with DVD players, satellite receivers, high-definition broadcasts, TVs, computers and video game consoles.

games on 12 foot-wide screens, with what is described as unmatched image quality.

The projector has native 16:9 resolution, meaning the onscreen image doesn't have to be compromised from its intended format, and includes a 2000:1 video-optimized contrast ratio to deliver the brightest whites and best black scene detail.

The design of the projector allows it to be mounted on the ceiling or wall, or placed on a tabletop, for versatile and convenient home use. This means the 6.8-pound projector is non-obtrusive enough to be tucked into the closet when not in use and easily travels with you on vacation or to your friend's and neighbor's houses. Additionally, the InFocus ScreenPlay 4805 features a 3,000-hour lamp life—which means you'll enjoy the same brightness while viewing more than 1500 movies.
