

# HOLIDAY GIFT IDEAS

## The Gift That Keeps On Giving—More Memory

(NAPSA)—More memory. That's a holiday gift most people would appreciate—especially when it comes to boosting their computer's performance. Fortunately, it's a gift that's easier to give and much less expensive than you might imagine.

With the quick pace of computer upgrades, many people find their computers are just too slow or poorly equipped to keep up with exciting new developments.

Instead of spending big bucks buying friends or family members a brand new system, you can give them an upgrade of their computer's key internal components.

In addition, you can add other hardware and software features which can enable their old machine to do much more.

For example, you can upgrade a PC with more system memory or RAM, add a faster processor, a more spacious hard drive or a more powerful video card for playing modern video games or using graphic-intensive programs. A backup device such as a CD or DVD burner can make storable copies of irreplaceable data such as digital photos, financial statements, critical documents, and music files. Hardware or software can be added to digitize or edit video, so the computer user can make home videos.

There's no lugging computer parts involved. Computer experts at franchises such as Geeks On Call

**Giving a computer system upgrade can make the season bright and keep your holiday spending budget intact.**

will visit the gift recipient's home, diagnose the problem or shortcoming and make adjustments.

For a fraction of what you might suspect it would cost, you can give friends and family an up-to-date computer system to help them greet the new year in style.

Geeks On Call has been recognized by "Entrepreneur Magazine" and "Franchise Times Magazine" as one of the fastest-growing franchise companies in the U.S. Because they are not part of a larger corporation, whose interests are to sell their own products, the company makes recommendations that best benefit their customers, without any conflict of interest.
