

Designing with Light

Tips On Using Nature's Extraordinary Design Tool

LIGHT CAN CHANGE EVERYTHING. DRAMATICALLY. These window shadings from Hunter Douglas diffuse light through two layers of sheer fabric. The result is a wonderful uniform glow inside without harsh shadows.

(NAPSA)—Did you know that window fashions can enhance natural light, not just control it? Natural light has a visual and emotional impact; it transfers heat in colder months; it elevates moods. One of the most useful and dynamic resources at our fingertips when designing an interior is natural light, providing we harness it to add privacy, shelter from glare, protection against the sun's harmful UV rays and to help create the desired mood.

"Window coverings can not only manipulate light to illuminate what we want to see, but also provide splashes of welcome and warmth in a home," said Penny Steyer, Director of Marketing Communications for Hunter Douglas.

One such product, Silhouette® window shadings, features rotating fabric vanes suspended

between sheer fabric panels. It diffuses natural light through two layers of sheer fabric. The result is a wonderful uniform glow inside without harsh shadows and a softened view of the outside, all while protecting against UV-ray transmission. And, the product is now available with colored sheer facings, as well as colored vanes for a spectacular interplay of light and color.

Luminette® Privacy Sheers, a similar product to Silhouette shadings that is vertically oriented, also beautifully enhances natural light.

Whatever your choice or style, window fashions can allow you to design the light that comes into your home.
