

## What's Cooking in Cooking

(NAPSA)—New trends in kitchen design include adding triple sinks, double dishwashers and mini burners.

**Over 45 million homes around the world enjoy innovative glass-ceramic panels.**

Other trends include top-performing ranges with glass-ceramic panels. They're attractive, cleanable, versatile and durable.

Ceran® glass-ceramic panels by Schott resist stains, scratches and thermal shock. They are engineered to stay sleek and clean even after years of use. They quickly respond to changes in heat settings and when not cooking, the perfectly smooth, flat cooktop can double as an extra work area.

Safety is ensured by clearly visible burner rings and a residual heat indicator, which stays on until the surface has cooled down and is safe to touch.

Schott continues to offer innovations in smoothtop cooking. The new white glass-ceramic ARCTIC-FIRE™ gives a clean, white appearance and is as easy to clean as the dark glass-ceramic.

To find out how you can get cooking with these new range tops, visit the Schott Web site at [www.us.schott.com/hometech](http://www.us.schott.com/hometech). For a copy of the brochure, Ceran® Questions and Answers, send requests to: Schott Corp., 3 Odell Plaza, Yonkers, NY 10701. You may also download a copy of the brochure on the Web site.
