

HINTS FOR HOMEOWNERS

Worry-free Windows

(NAPSA)—When choosing a window, you want to make sure your investment is secure. A worry-free window provides:

- A clear view
- A comfortable environment
- Energy savings
- Low maintenance and long-lasting performance

Warm edge spacer systems are designed to last for many years, delivering high performance, long-lasting, worry-free windows.

Warm-edge insulating glass spacers, help achieve these goals by protecting against two common household villains:

1. **Condensation:** Poorly insulated windows let moisture collect as condensation. It can obstruct your view and increase your risk of mold. Windows built with warm-edge spacers reduce condensation.

2. **Energy Loss:** Windows manufactured with cold edge metal spacers can easily let a blustery winter day or the extreme heat of summer into your home. Spacers such as DuraSeal from TruSeal Technologies, Inc., are energy efficient because they reduce heat transfer and improve inside glass temperature. The result is a more comfortable home year-round and lower energy costs.
